AB - J05123398 Inhalant is for treating bronchial asthma,
bronchial inflammation and pollinosis and is used by
inhaling an aq. soln. based on calcium through
spraying to adsorb harmful substances, such as
allergens, and pollen which have adhered to the mucous
membrane of respiratory organs, such as the nasal
cavity and bronchial tubes so as to be discharged.
- A new folding cover for inhalation has a double-fold
part to come in contact with the face of a person, a
liq. reservoir in the bottom part, a vent in the back
part and a connecting ring capable of bending flexibly
in the horizontal direction, connected to the acceptor
of the connecting portion of the inhaling device and
rotating freely.
- USE/ADVANTAGE - The method and device are effective
against bronchial asthma, bronchial inflammation and
pollinosis of people inhabiting polluted areas and
having such occupations(Dwg.0/0)
